

Bioswales:
two buried drainage areas under access paths, approx. 8 feet wide. Planted with plugs, dormant cuttings.

Meadow areas: integrate with bioswales, and serve as additional stormwater filtration. Compost & seeded.

Paths: provides four access ways from School Street to existing path to bridge and to existing benches.

Bank Stabilization/ Living shoreline: Coir logs create protective substrate for aquatic revegetation zone. Brush matting provides three shoreline stabilization zones where impacted by severe erosion.

Childrens seating (optional TBD):
Provides space for an outdoor classroom under shade trees. Engages students to visit park and ecosystem.
